MULTI-FACTOR AUTHENTICATION

Always enable multi-factor authentication.

It's as easy as learning a new dance move and your online accounts will thank you. Multi-factor authentication, or MFA, is a security measure that requires anyone logging into an account to navigate a two-step process to prove their identity. It makes it twice as hard for criminals to access an online account. When it's available, always turn it on because it's easy to do and greatly increases your security.

How does MFA work?

By adding one more simple step when logging into an account, multi-factor authentication greatly

MFA can include:
